Tools for the Occam Technician

This on-site, hands-on class is intended for technicians that work on Occam equipment on a daily basis. The objective of this class is to enhance working knowledge to provide the technician with a set of techniques and tips that can be used to add new blades to existing rings, trouble-shoot active cards to minimize outages and be proficient in critical situations. This class is intended as an enhancement to official Occam/Calix classes and is not meant as a replacement. The technician is expected to be familiar with the Occam equipment (chassis, cards, basic ring topology). The client will need to have open slots available in a BLC 6000 series chassis (single, 6 slot or 12 slot chassis) and spare cards. Typically, one slot and one card is required for two people.

- Occam Certified Installer/Trainer
- On-Site Training
- Hands-On
- Real World Applications
- Troubleshooting Techniques
- Scripting and What It Means
- Tailored To Your Application

*“Just what we have been looking for!
Taught on our equipment...at our office.
Helping our technicians with day to day
situations. “*
